

HORAMA

GENE THERAPY DEDICATED TO RARE OPHTHALMOLOGY PATHOLOGIES

Press release

## Horama raises €19 million in a Series B financing round

Horama raises 19 million euros from new investors (Kurma Partners, Fund+, Pontifax and Idinvest) and existing investors (Omnes Capital, GO Capital and Sham Innovation Santé/Turenne) to fund the development of **gene therapy treatments for rare retinal diseases**

**Paris, France, November 8, 2017** – Horama ([www.horama.fr](http://www.horama.fr)), a French biotech company based in Paris and Nantes that specialises in gene therapy for the treatment of rare, inherited retinal diseases, announces today a 19 million euros Series B financing from four new investment funds (Kurma Partners, the lead investor; Fund+; Pontifax; and Idinvest) and from the company's historical investors (Omnes Capital; GO Capital; and Sham Innovation Santé/Turenne). This fundraising was intended to finance the development of the **HORA-PDE6B** project, including the start of its clinical phase, which has just been authorised by the French regulatory bodies. This financing round took place on the heels of the 4 million euros raised in July 2016 (Series A).

Horama has developed a diversified portfolio drawing on its gene-therapy platform, whose two main programs have orphan-drug status: **HORA-PDE6B** (retinitis pigmentosa), which will soon be administered to the first-ever patient in a Phase I/II clinical trial; and **HORA-RLPB1** (RPA or Retinitis Punctata Albescens), which is at a nonclinical stage.

**HORA-PDE6B** is a drug candidate for the treatment of retinitis pigmentosa caused by mutations in the *PDE6B* gene. This replacement gene therapy provides a non-mutated copy of the *PDE6B* gene to express a functional PDE6 $\beta$  protein. There is currently no approved treatment for retinitis pigmentosa.

*"We thank Omnes Capital, GO Capital and Sham Innovation Santé/Turenne for their renewed trust as well as our new investors, Kurma Partners, Fund+, Pontifax and Idinvest, for their support. The success of this fundraising comes as further recognition of our ability to develop gene therapy treatments in ophthalmology. It will allow us to boost our research programs, including our Phase I/II study with HORA-PDE6B"* reacted Christine Placet, CEO of Horama.

*"Kurma Partners shares Horama's passion for developing treatments for rare diseases with no effective treatment available. We are pleased to support the team as it prepares to launch a Phase I/II clinical trial for the HORA-PDE6B product"* said Thierry Laugel, Managing Partner at Kurma Partners.

*"In July 2016, our goal was to strengthen the Horama teams and, in particular, bring HORA-PDE6B to the clinical stage. These objectives were met through the addition of key skills and the authorisation granted by ANSM to launch the HORA-PDE6B Phase I/II clinical study. The additional funds raised will allow Horama to take the next step in its development"* added Bruno Montanari, Partner at Omnes Capital.

*"We have been impressed by Horama's potential and the quality of its team and are happy to support its development"* said Ohad Hammer, Partner at Pontifax.

GENE THERAPY DEDICATED TO RARE OPHTHALMOLOGY PATHOLOGIES

*“We are delighted to join this strong syndicate of leading life science investors” said Dr. Philippe Monteyne, a partner at Fund +. “We were drawn to Horama by its experienced team and their innovative approach to gene therapy. This powerful combination will contribute to making treatments available in the future for rare ophthalmological diseases.”*

### **About Horama**

Horama is a clinical-stage biotech company that develops gene-therapy treatments, based on recombinant adeno-associated virus (rAAV) vectors, targeting rare inherited retinal diseases. Horama was founded in 2014 by a complementary team of world-renown academic researchers who conducted, in 2011, one of the first clinical trials of gene therapy applied to ophthalmology in France, including: Philippe Moullier, Christian Hamel (1955-2017) and Vasiliki Kalatzis, from the French National Institute of Health and Medical Research (INSERM); and Michel Weber and Guylène Le Meur, from the Nantes University Hospital in France.
